

# come home to Spectrolink Multizone comfort

Unprecedented control and economy throughout your home

## Warmth to suit everyone

Imagine being able to simultaneously set different temperature zones within your home, allowing increased comfort at lower running costs.

Make the baby's room a bit warmer than the lounge?  
Need more warmth in just the upstairs bedrooms?  
With Braemar's amazing Spectrolink Multizone system, it's easy! (optional on all 4 and 5-star Ecostar models).

## Four different temperature zones

Perfect for single and two-storey homes<sup>1</sup>, the amazing Spectrolink Multizone allows you to create up to four different heating zones<sup>2</sup>. Only Braemar Ecostar offers you such incredible control and flexibility.

Simply decide which rooms are to be in each heating zone when you plan your Braemar Multizone Ecostar ducted gas heating system. For example, group the lounge, dining room and study in one zone, the bedrooms in another. Zoning options are incredibly flexible.

Each zone has its own Spectrolink controller giving you total control over the individual comfort levels throughout your home.

## Reduced heating cost - improved comfort

An additional benefit of Braemar Spectrolink Multizone is improved operating efficiency. With greater control you'll no longer be forced to waste money and energy overheating rooms.

This means genuine savings on heating costs and much greater personal comfort for you and your family.

## Revolutionary Spectrolink convenience

The Spectrolink Multizone Controller<sup>3</sup> gives you fingertip control over every function of your ducted gas heating system, including:

- Regulating temperature throughout your home
- Temporarily over-riding current settings
- Automatically turning zones on or off up to 4 times daily

The amazing Spectrolink Multizone Controller will also operate Australia's most popular brands of evaporative coolers - Braemar, Breezair and Coolair.

## Home/Away setting

The Home/Away setting is yet another great feature of the Spectrolink Multizone Controller.

This very clever function allows you to temporarily change your standard system settings, and save on running costs.

For example:

- Suspend the heating cycle
- Switch the system on or off earlier than usual
- Change zone settings

## No need to reprogram

No matter how many times you use the Home/Away feature your original system settings will always remain.

There is no need to reprogram anything because a simple press of the button will immediately return the system to your original optimums.

# come home to fingertip control

Heating and cooling with a very smart single controller

Set the upstairs bedrooms to 20°C

Set the lounge and formal dining to 21°C

Set the kitchen and meals to 18°C

Set the study and sitting room to 16°C

The amazing Spectrolink Multizone Controller gives you absolute control

Wahy, its cold outside

1. Spectrolink Multizone function subject to suitable structural conditions  
2. Typically, a minimum of three outlets per zone is required  
3. Spectrolink Multizone function only available with Multizone system installation
